

Better Computing
Resources ...

OASys™ Less Hassle More Horsepower

Technology resources are the backbone of every business. Desktops, servers, laptops, email, the Internet and software applications. All are key to facilitating your customer orders, tracking inventory and shipments, and even maintaining financial records. This infrastructure is so important that most businesses risk losing thousands of dollars every day if their technology does not perform.

The problem is... it takes a small fortune to keep current and ahead of problems and downtime. It is costly, complicated and time consuming to purchase new or continually upgrade equipment, and to maintain software applications and current licenses. Not to mention the challenge of finding properly trained personnel to maintain and support it all. Industry analysts estimate the total cost of ownership (TCO) for desktop or laptop computing resources (hardware, software and support) at roughly \$7500 per year. Businesses can spend more time and money focusing on managing their IT resources than on their customer relationships.

The alternative - OASys™, the Office Anywhere System. A new concept in corporate computing from Aztec Systems. OASys delivers better computing power to your business and may help you reduce your total cost of ownership by up to half!

We manage the powerful infrastructure from servers to applications in our secure data center. We even guarantee your system availability from any desktop... anywhere. In your office, on the road, in the airport. Wherever you or your staff have access to the Internet your business keeps running. Remote offices and mobile employees have virtually painless access to all their corporate applications and data all of the time, 24 hours a day, seven days a week.

With your desktops, an Internet connection, and OASys™ you've got more horsepower with less hassle.

The Office Anywhere System from Aztec

Cut the clutter with OASys.

What is the OASys™?

OASys is a per-user licensed, subscription model for delivering the most common Microsoft-based software applications directly to your desktop from anywhere, anytime over any Internet connection.

Three basics are needed to move to an OASys solution:

- 1 An office desktop, or laptop, or any computer anywhere.
- 2 Internet access.
- 3 Shared network or local printers for output.

That's it! Each user receives an OASys login ID and password to access his or her specific applications and data over the Internet.

Each subscribing desktop starts with an initial OASys configuration and then can be customized with individual software application(s) specific to the user. See our list of options, or talk to us about others and even adding your own proprietary applications.

OASys™ DESKTOP SERVICE

BASIC CONFIGURATION

- Microsoft® Office XP Standard (Word, Excel, PowerPoint)
- Microsoft® Exchange Email (Outlook XP)
- Antivirus Email scanning
- Web content filtering
- 100MB per-user storage

- REMANAGE® - Property Management System¹
- Other approved Win32 applications^{1&3}
- Additional data storage

1 - Customer must provide and maintain a license for each user. 2 - Separate License Agreement with Aztec required. 3 - One time setup fee for approved applications.

Each user must have their Connection Method and access to a local (parallel or workgroup) printer(s) already configured on each desktop. Items not included in Initial Setup include but are not limited to static IP addressing, DHCP, DNS, Internet gateway, routing, switching, domain authentication, remote firewall, network design, network architecture and/or network implementation. Installations requiring any of the above mentioned items will be quoted and a proposal submitted individually or on a per project basis. Customer must provide detailed list of printers with exact model number, and operating system versions that will use the printers.
